The following is an examiner's statement of reasons for allowance: Oster (US 5902661, figure 2) is the closest art of record and teaches a towel attachment device comprising a first material 12 with a clip 52 attached to the upper middle portion of the towel for securing the towel and a second piece of material 18 in a lower corner of the golf towel. The differences are that the first and second materials are not rectangular with a carabiner with a pivoted latch secured to an eyelet of an upper corner of the first material and the two materials are not secured together at a first edge of the second material that is parallel to and approximately equi-spaced between the first and third sides of the first material, wherein first and second material members form a club cloth for selectively cleaning an object therebetween and "said second material member is further connected to said first member along a second edge thereof adjacent to said first edge not along a side of said first material member so that unattached edges of said second material member are aligned with said third and fourth sides of said first material member, thereby forming a flap with two adjacent sides attached to said first material member" (lines 18-23). There is no suggestion in the art of record to modify the device of Oster to have to combination of differences identified above.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
